The Physiological Benefits of Climbing:

Fitness enthusiasts quickly
recognize the benefits of climbing:

Core Muscle Development

Stabilizer Muscle Conditioning

Hand / Grip Strength & Dexterity

Eye-Hand Coordination

Cardiovascular Improvement

Flexibility

Balance

Stamina

Introducing The Freedom Climber:

The best fitness equipment gives you a **New Competitive Edge** and is **Safe, Effective, Simple to Use, Durable, Space Saving, Low Maintenance, and Priced Right.** The Freedom Climber provides all the benefits of climbing without the risk of falling from dangerous heights or the added expense for special supervision. It requires no electricity, motors, or batteries; and is virtually maintenance free. Mounted to a wall it only extends 8 inches and the 90 inch climbing surface rotates quietly as the user climbs on the right or the left side.

The space saving design enables any facility - Recreation Centers, School, Offices, or Homes to offer a safe, fun, unique climbing experience. Free from harnesses. Free from ropes. **No risks. No strings.**

Terry McCall
President / Inventor

How it Works:

The 90-inch climbing surface rotates either clockwise or counter-clockwise. The action of climbing causes the rotation. The speed of rotation can be adjusted and is controlled and held constant, regardless of the climber's weight, by a patent pending mechanism. The speed can be fine tuned to the climber's ability ensuring success for everyone. With the turn of a knob the speed of rotation can be set anywhere from a slower, easy climb to a rapid, challenging climb. The user is climbing while maintaining a safe distance from the floor at all times. As the climber attempts to climb up, the climbing surface rotates down keeping the user in the same location. When the climber stops climbing the rotation stops. (Arrow indicates rotational direction of the Freedom Climber)

Climbing Surface:

The climbing surface consists of a recycled rubber that is very popular with designers and architects for its lasting performance, easy care, and cutting edge style. The standard patterns are shown to the right. Additional patterns are available upon request allowing you to choose color combinations that match your existing facility or to create a whole new climbing environment.

As an available option, your organization's name or logo can be cut out and embedded in the Freedom Climber.

In addition to the climbing surface, safety flooring is also available. The dimensional drawing shows the size of the Freedom Climber (9'4" x 9'4" square) in relation to the suggested size of the safety surface area (6' from the wall by 12' wide).

A Kid Magnet:

Kids can't wait to try the Freedom Climber! It is the perfect answer to the renewed emphasis on youth fitness. The Freedom Climber provides a safe, fun, unique, and cool way for children to increase their strength, flexibility, stamina, confidence, and burn calories without them ever complaining (except when they have to wait their turn).

Both its size*, price, and easy installation make it possible for a local school or recreation center to offer climbing as part of the overall physical fitness and recreation program.

* A smaller 72 inch model is available

A man in a black tank top is climbing a dark rock wall with various handholds. The background is a textured, brownish-orange wall.

Our Mission:

The goal of Technical Sports and the Freedom Climber is to provide the physical challenges and exercise benefits of climbing in a safe environment making it possible for even those who fear traditional climbing walls to be able to participate in this great recreational activity.

The Freedom Climber creates a realistic climbing experience and provides all the physiological benefits of climbing. It uses minimal floor space and requires no supervision, no electricity, no harnesses, no ropes. . .

No strings!

FREEDOM CLIMBER

A Revolutionary Rock Climbing Trainer that easily mounts to your wall, rotates, and adjusts to the climber's ability.

You now have the freedom to gain all the strength and conditioning benefits of rock climbing whether you're at home, office, or gym. Free from harnesses. Free from ropes. No risks. No strings.

A man in a black tank top and shorts is sitting on the floor next to a large, dark rock climbing wall. The wall has many handholds. The background is a dark, textured wall.
